THE LIBRARIAN — SYSTEM FEATURE SUMMARY

Core Concept

A pixel-based RPG learning system where users explore different “wings” (History, Literature, Theology, Geography) and learn through:

Narrative storytelling

Non-narrative quizzes

Interactive progression

USER ROLES

1. Players (Learners)

Players interact with the game world and learning content.

Features:

Explore different wings (chapters)

Complete:

Narrative levels (story + puzzles)

Non-narrative quizzes (instant learning content)

View performance dashboard:

Playtime

Current wing

Score

Accuracy

Weakest learned category (auto-detected)

Receive system suggestions:

“Focus more on Theology: Prophets”

Compete via leaderboard

(Future) Participate in group/class challenges

2. THE ARCHITECTS (Teachers / Content Managers)

Main role: Control learning content + monitor users

Content Management

Add Questions:

Narrative (goes to Fabricators)

Non-narrative (instant auto-level generation)

Edit / Delete / Preview questions

Maintain Question Bank

Question Metadata System

Each question includes:

Wing (History, etc.)

Difficulty (Easy / Medium / Hard)

Tags (WW2, Poetry, Maps, etc.)

User Analytics Dashboard

View individual player stats:

Playtime

Current wing

Accuracy

Score

Advanced insights:

Weakest wing

Weakest topic (via tags)

Performance trend

Content Assignment System

Assign quizzes to:

Individual users

Groups (Classes)

Feature: “Push Challenge”

Approval Workflow (Narrative Content)

Architect submits request

Fabricator builds content

Architect: Approves or Rejects

Requests revision

Performance Analysis Tools

Average completion time

Fast vs slow learners

Accuracy vs speed insights

Quiz Generation (System + AI)

Auto-generate quizzes using:

Tags

Difficulty mix

Moderation System

View flagged questions

Edit or remove incorrect content

Progression Control

Set unlock conditions:

Score thresholds

Accuracy requirements

Content Portability

Export questions

Import questions

3. THE FABRICATORS (Developers / Content Builders)

Main role: Create narrative experiences

Features:

Receive narrative requests from Architects

Design:

Storylines

Puzzles

Interactive levels

Implement into game system

Submit for approval

AI INTEGRATION (Planned via OpenAI API)

Core AI Features:

1. Quiz Generator

Generate MCQs from:

Topics

Text input

2. Smart Hint System

Provide contextual hints instead of answers

3. Answer Explanation Generator

Explain correct answers after quiz

4. Performance Feedback Generator

Convert stats into meaningful advice

5. Narrative Generator

Assist Fabricators with:

Story ideas

Puzzle design

6. Auto Tagging System

Automatically assign tags to questions

7. Difficulty Estimation

Classify questions into Easy / Medium / Hard
